

TRAFLUX

The Metro dumpster is completely underground and is placed in a concrete pit. With an available volume of up to 5000L, it is easy to collect a large volume of waste in a small area.

METRO®

Finish

The Metro is composable with 2 different insert columns and different insert openings. Each opening can be adjusted to the waste fraction. The top column can be finished in RAL color of your choice and has an anti-graffiti coating.

Each container can be equipped with an access control system.

Safe and high-quality system

Robust functionality by galvanized thick sheet steel, fully zinc bath hot dip galvanized and fully welded on all parts.

Safe due to a safety flip floor and an easily accessible and operable throw-in opening

Insert columns

There are 2 models available to equip the superstructure.

- The M61 with double-scale throw-in drum with a volume of 60L/80L/100L
- The M162 with drop-in lock

Insert drum

Throw-in lock

Insert openings

Each waste stream requires its own insertion opening adapted to the waste to be sorted.

Mainly there are 3 possibilities: throw-in drum, glass sleeve or paper lid.

insert drum

(glass) sleeve

(paper) lid

pickup system

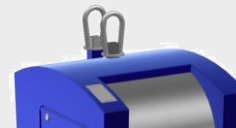

The most common recording systems are offered. Kinshofer, three-hook, two-hook and tapping.

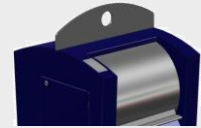

Kinshofer

three-hook

two-hook

tapping

Access control system

The Chiplock access control system allows for authorization and registration of the waste container. It is possible to communicate with collection system users. This Mifare card reader is ideal for keeping track of registration.
